

3D STUDIO

Services at Smithsonian Exhibits

Smithsonian Exhibits' 3D Studio is the only one of its kind at the Smithsonian. It is a full-service operation producing replicas, dioramas, mannequins, touchable 3D maps, object mounts and brackets, and more. Our model makers and artists use traditional methods along with the latest technology, including 3D scanning and printing, to replicate the precise details of an object and produce an exact copy. We fabricate everything from skulls to artificial mountains, and we devise hands-on interactives that keep museum visitors engaged. What can we make for you?
